

IDF UGANDA

Immanuel development foundation

Our foundation is a registered Ugandan nonprofit, dedicated to improving the lives of vulnerable people. We bring together the financial resources of individuals and families to support those that need our help the most.

Renewable Energy as a tool to combat climate change

It's our realization that in a bid to combat climate change, we must raise awareness through Civic knowledge and Practical skills to each individual, community so that it becomes a joint cause to save Mother Planet.

Immanuel Foundation's plan on Renewable Energy

Today the whole world is suffering from the effects of Climate change, Uganda, Africa and the world at large the subject remains on a small scale and untapped potential in majority of the countries.

At Immanuel Development Foundation it is our greatest desire to engage the community in renewable energy through skilling the youths, children, women and communities, schools and the general public at large with hands on practical knowledge in Renewable energy, its sources, safety and application in their everyday life.

Climate action and Renewable Energy

We have planned 4 Strategies

Renewable energy is energy that is collected from renewable resources that are naturally replenished on a human timescale. It includes sources such as sunlight, wind, the movement of water, and geothermal heat.

1 Combat

The first thing we do is to combat climate change and its effects on human and nature.

2 Say no to pollution

Keeping the environment clean from contamination and pollution from bad fuel and fumes.

3 Usage

Using Renewable Energy as a source of clean energy for both domestic and commercial use.

4 Source of income

Renewable Energy as source of living for the communities, engaging it as a source of income for parties involved in production, and institutions.

Our Effort as Immanuel Development Foundation in Uganda will lay basically in:

1

Creating mass awareness through all mediums possible so that people will come to full knowledge of the subject on Renewable energy generally.

2

Passing on practical skills and combine teaching manuscripts to deliver practical knowledge to the current and the future generations through training more expert society groups in a 3 year campaign.

We have branded "**TRAINING OF TRAINERS**" Energy Campaign 2023 - 2026 Which we intend to run across Uganda and Africa as a whole.

Our Training Manual will be:

- i)* Created in partnership with various Institutes of Technology, Research bodies, Organizations and departments of Science in Electrical Engineering both local and international in private sector and governments.
- ii)* Explores what is the best energy source. We dive into a range of renewable energy options, emerging eco-friendly energy sources, and the different types that are currently in use.
- iii)* Learn more about how they work, what is the cleanest form of energy, and how experts determine their Efficiency.
